PSG CAMPUS HIRING | 2027 COHORT

Build the AI-powered operating system for the creator economy.

Graduate opportunities in Software Engineering, High-Tech Business Development and Entrepreneurial Engineering

OCTOBER 2026

Our vision for the creator economy.

Build the AI-powered operating system for the creator economy.

Creators should spend their time creating, not stitching tools together.

FROM Disconnected tools

→ **One live CreatorOps platform**

FROM Manual hand-offs

→ **An AI-powered workflow**

FROM One-off effort

→ **Repeatable learning and growth**

What IncuBrix offers creators.

One workflow from idea to insight.

01

Discover

Find ideas worth making.

02

Create

Produce content with AI support.

03

Repurpose

Turn one piece into many formats.

04

Publish

Get your work out to your audience.

05

Learn

Use analytics to see what worked.

All five stages in one live platform. Explore it at **app.incubrix.com**

Creators need one operating system.

Not another disconnected tool.

Most creators still move manually between ideation, creation, repurposing, publishing and analytics.

IncuBrix brings the full journey together in one live CreatorOps platform.

A single workflow turns creator effort into repeatable learning and growth.

This is a live product company.

Expect real responsibility, early.

20

people across Singapore and India

5

Singapore

15

India

What that means for you

The India team consists primarily of 2026 graduates across engineering, AI, product and growth.

Ideas can reach production—and a creator's workflow—in days.

You get context, feedback and senior access, then own measurable outcomes.

“We do not lower the bar because you are a graduate.”

Access and ownership create the learning curve.

What current team members say

9 in 10

cross-role and technology exposure

7 in 10

early ownership

7 in 10

direct senior-leader access

8 in 10

say this is not a large-company environment

The trade-off is clear: broad exposure and direct access come with ambiguity, pace and personal accountability.

Source: Anonymous IncuBrix employee pulse, October 2026 (n=12).

Choose the role by how you create value.

Every track demands strong fundamentals, rapid learning and ownership.

01	**Software Engineer**	Ship reliable product and AI/media systems—and improve them with production evidence.	**EVIDENCE THAT STANDS OUT** Working software · clean code · debugging depth · measurable engineering improvement
02	**Growth Engineer**	Engineer commercial systems and move qualified opportunities toward pilots and revenue.	**EVIDENCE THAT STANDS OUT** Automation · market insight · customer conversations · qualified pipeline · commercial outcomes
03	**Associate Tech Partner**	Clear both bars, then own product and business outcomes like a mini-venture.	**EVIDENCE THAT STANDS OUT** Production-grade engineering · commercial judgement · entrepreneurial ownership

Select one primary role. For Associate Tech Partner, select both Software Engineer and Growth Engineer.

Software Engineer: ship, observe, improve.

Own production systems used by creators—and prove they are reliable.

LIKELY STACK

Go · Python · TypeScript/React
APIs · queues · cloud · AI/media workflows

THE BAR

- Build, test, release and remain accountable after launch.
- Debug with logs, metrics and disciplined reasoning.
- Improve reliability, latency, cost, output quality or user completion with evidence.

Your first 90 days

01—30	**Ship early**	Resolve a production defect and release a customer-visible improvement.
31—60	**Own end to end**	Design, build, test, instrument and release a bounded feature or service.
61—90	**Prove impact**	Lead a measurable improvement and defend the before/after result.

Selection: new production problem · correctness · tests · debugging · trade-offs · measurable improvement

Growth Engineer: build the commercial system.

Code and sell—with automation and market evidence.

What you will own

- Identify priority segments, decision-makers and buying triggers.
- Build ethical, sourced automation for research, personalisation, CRM and forecasting.
- Run discovery, demos and proposals; move qualified opportunities toward pilots or revenue.
- Turn objections into better product and commercial decisions.

Sourced leads · verified data · no spam

Your first 90 days

01—30	**Master product + ICPs**	Build a sourced pipeline and hold at least 10 qualified discovery conversations.
31—60	**Own a motion**	Run outreach, demos and at least two credible pilot or partnership proposals.
61—90	**Move one opportunity**	Advance one qualified opportunity into pilot, commercial evaluation or due diligence.

Selection: sourced pipeline · useful automation · discovery · pitch · pilot proposal · commercial judgement

Associate Tech Partner: clear both bars.

Then own a mini-venture outcome - **Our highest-scope graduate track**

What you will own

- Write production code. Speak with users. Make technical and commercial trade-offs. Own the result from idea to adoption, pilot, revenue potential or cost improvement.
- **3× impact comes from judgement, speed, automation and ownership—not simply longer hours.**

Your first 90 days

01—30	**Ship + discover**	Ship an improvement. Hold 5+ conversations. Present one opportunity thesis.
31—60	**Prototype + validate**	Build the prototype, model value/ROI and defend a go/no-go case.
61—90	**Launch + lead**	Ship an MVP. Secure adoption or a pilot path. Lead the decision review.

Selection requirement: clear both the Software Engineer and Growth Engineer bars.

Know the commitment before you opt in.

The pathway is a full-time offer with probation—not a casual internship.

ELIGIBILITY

PSG 2027 B.Tech students from eligible School of Computing and School of EEE branches, subject to university norms.

OFFER & JOINING

Full-time offer issued at selection. Joining may be immediate, December 2026 or early January 2027, based on role and business needs.

BASE & MOBILITY

Tiruchirappalli initially. Be open to a future move to Bengaluru as the team expands; the final arrangement is stated before acceptance.

CAMPUS COMMITMENT

Under PSG norms, accepting the IncuBrix offer means you will not participate in subsequent on-campus hiring processes.

Probation: 6–10 months · PSG may recognize the period until graduation for internship / final-semester project requirements · role-relevant medical assessment may apply.

Selection rewards evidence over pedigree.

We assess what you can build, learn, explain and own.

15 OCT

Briefing

Mission, roles, terms and Q&A

1–2 DAYS

Interest form

Role choice, eligibility and evidence

7 DAYS

Assignment

Real-world, time-boxed assessment

AFTER SHORTLISTING

Interviews

Defence, deep dive, values and leadership

AFTER SELECTION

Offer

Clearance, university steps and joining

Assignment submissions are for assessment and will not be deployed as unpaid production work.

Plan for two on-campus interview days; a third may be added based on volume or final-round logistics.

Your role and CTC tier are confirmed upfront.

PROBATION

₹20,000

per month · 6–10 months

Confirmed CTC activates from 1 July 2027 after successful probation and completion of PSG academic requirements.

	TIER 1	TIER 2	TIER 3
Software Engineer / Growth Engineer	**₹5 LPA**	**₹8 LPA**	**₹12 LPA**
Associate Tech Partner	**₹10 LPA**	**₹15 LPA**	**₹20 LPA**
TIER LOGIC	bounded execution	end-to-end ownership	ambiguous, material impact

Offer terms state pay mix, measures and schedule. Tier reflects verified capability, judgement, ownership and results—not hours.

Come prepared to defend your work.

What to submit

01 One primary role
For Associate Tech Partner, select both engineering and growth.

02 Outcome-focused resume
Show what changed because of your work—not only the tools.

03 Project evidence
Use the prescribed format; include work you can personally defend.

04 150-word response
What would you improve first for creators—and why?

How AI tools are handled

AI use may be permitted - but accountability cannot be delegated.

- Disclose material AI use.
- Verify every output.
- Explain every decision.
- Protect confidential information.

Unverifiable or copied work will be rejected.

Choose ownership—not predictability.

Opt in with a clear view of the environment you are choosing.

You are likely to thrive if...

- You want broad exposure and direct access to decision-makers.
- You learn mainly through real work, review and self-directed study.
- You can adapt when user evidence, quality or business needs change.
- You want recognition tied to verified capability, ownership and results.

Think carefully if your priority is...

- A fixed scope from day one.
- Fully established processes.
- Continuous supervision and classroom-style training.
- A predictable large-company environment.

Time-critical releases may occasionally require schedule flexibility. Health, safety, dignity and respectful conduct are non-negotiable.

YOUR NEXT MOVE

Your decision starts with one role.

01

Choose

Select the role that matches how you create value.

02

Prepare

Bring outcome-focused evidence you can defend.

03

Respond

Explain what you would improve first for creators—and why.
